

# SCAN TO NOTIFY

## INITIATE AUTOMATED WORKFLOWS

Enhance staff workflows, improve efficiencies and create a better customer experience with Scan to Notify.

### Overview

Customers are enticed to scan or tap the QR code or press the button to notify staff of service required, as well as alerting cleaners of areas requiring attention. Custom designed artwork with a QR code included performs as a switchboard to trigger messages out to the right person or role, as required.

The workflow options can include key personnel including the Duty Manager, Cleaner, Security, Restaurant, Cashier and many more. The portal can launch tasks/events direct to PulseLive, or display a rating and review section.

### Workflow

- A customer notices a Restroom that requires attention
- Custom branded artwork with a QR code and button is displayed on the wall for guests to see.
- A customer scans the QR code with their mobile device or presses the button
- A workflow is triggered and the right staff member is informed of the service required
- The staff member uses the NFC (Near Field Communications) to tap with their smart phone to close the task.
